

FOAMULAR®
Energy-Saving, Moisture-Resistant XPS Insulation

Wine Cellar & Wine Storage Insulation

Successful wine storage requires constant temperature and high humidity, creating some unique problems for insulation. Most insulation would underperform in these conditions, but Foamular is not affected by moisture in the air, so it is ideal for this unique circumstance.

Insulation is an Investment

Serious wine storage requires expensive temperature and humidity control, but Foamular's high R-Values create an effective barrier to temperature fluctuations, reducing the strain on machines and improving energy efficiency.

Foamular can be directly fixed to timber, steel, masonry or concrete. Foamular will not aid in the transfer of humidity, which helps protect the adjoining rooms and structures. Foamular is also an ideal substrate for many finishing systems, including render, timber and stone.
